Mode of Program	Online Webinar
Activity for Class/Group	Students, Faculty, Researchers and other
Beneficiary number	Registered 571 Participants We have received 800 views on You tube
Nature: Academic /Co- curricular/extracurricular/Environm ental/Social/other	Academic and Social
2. Brief information about Activity	
Topic /Subject of activity	National Webinar on "Awareness Program on Organ Donation"
Objectives of the activity	<ul style="list-style-type: none"> To motivate to the people to pledge to donate organs after death. To spread awareness about the importance of organ donation.
Methodology	Webinar – Conducted Video Conference Meet through Zoom Meeting app.
Introduction of the organ Donation	Organ Donation Day is observed every year on 13 th of August. Due to lack of awareness, there are myths and fears in peoples' mind about organ donation. Organ Donation is donating a donor's organs like heart, liver, kidneys, intestines, lungs, and pancreas, after the donor dies, for the purpose of transplanting them into another person who is in need of an organ. According to a survey In India every year about: 500,000 people die because of non-availability of

	<p>organs, 200,000 people die due to liver disease, and 50,000 people die because of heart disease. Moreover, 150,000 people await a kidney transplant but only 5,000 get among them</p> <p>The Ministry of Health & Family Welfare has urged people all of communities to come forth and generously donate organs to help the noble cause of saving precious lives. The Ministry had launched the 6th World and first ever Indian Organ Donation Day and Organ Donation Congress 2010 in New Delhi.</p>
<p>Facts about the Organ Donation</p>	<ul style="list-style-type: none"> • Anybody can be an organ donor irrespective of their age, caste, religion, community etc • There is no defined age for donating organs. The decision to donate organs is based on strict medical criteria, not age. • Tissues such as cornea, heart valves, skin, and bone can be donated in case of natural death but vital organs such as heart, liver, kidneys, intestines, lungs, and pancreas can be donated only in the case of 'brain death'. • Organs such as the heart, pancreas, liver, kidneys and lungs can be transplanted to those recipients whose organs are failing because it allows many recipients to return to a normal lifestyle. • Anyone younger than age 18 needs to have the agreement of a parent or guardian to be a donor. • Having a serious condition like actively spreading cancer, HIV, diabetes, kidney disease, or heart disease can prevent you from donating as a living donor.
<p>Outcome of the Activity</p>	<p>Students, Faculty and other participants have received valuable information on organ donation and its facts.</p> <p>They might have motivated for the organ donation through this event.</p>
